

JIM TISDALE

AI / Agent Engineer · Senior Software Engineer (TypeScript · React)

Charlotte, NC (Remote) · jctisdale1988@gmail.com · (704) 713-8520 · author.sylphie.live · github.com/Sylphie-Labs · linkedin.com/in/jim-tisdale

SUMMARY

Engineer building AI-native interfaces and agentic systems on a 7+ year production frontend foundation. I ship MCP-based integrations that connect LLM-powered agents to real data — two published npm packages, a live agent deployment, and four source-linked engineering case studies at author.sylphie.live. React/TypeScript craft from Mediavine's ad-tech platform (thousands of publishers), now aimed at conversational, agentic user experiences that keep the LLM out of the decision loop.

SKILLS

- **Expert:** TypeScript, JavaScript, React, Node.js, NestJS
- **AI / Agents:** MCP servers & clients, Claude API, Claude Code (hooks · skills · sub-agents), tool calling, agentic workflow design, agent memory & retrieval (TimescaleDB, Postgres trigram search, embedding schema), multi-agent code review, prompt & agent-system design
- **Data & Infra:** Neo4j (Cypher), PostgreSQL (incl. row-level security), TimescaleDB, GraphQL/Relay, REST, WebSockets, Docker, Jest/RTL, Playwright, CI/CD
- **Production, AI-assisted:** Python · FastAPI · TensorFlow

SELECTED WORK

Sylphie Labs (Independent) — AI / Agent Engineer

Oct 2025 – Present · Remote · began alongside Mediavine, full-time since Mar 2026

- **@sylphie-labs/memory-pkg** (published npm) — long-term memory for coding agents: lifecycle-hook transcript capture into TimescaleDB, multi-tier retrieval with a pure-SQL hot path, and an MCP server for deliberate recall; fails open at every layer.
- **@sylphie-labs/codebase-pkg** (published npm) — the codebase as a queryable Neo4j graph served to agents over MCP — a map for the agent, not a flashlight; ts-morph AST diffing with integrity-gated sync; ported between repos in ~30 minutes.
- **Enforcement hooks** — fail-safe agentic review workflow for Claude Code: line-level checks on every write, intent-level review at every stop, grading the cumulative diff against the user's original request, with Playwright verification required, not optional.
- **Sylphie** (live at sylphie.live) — cognitive architecture with the LLM out of the decision loop: 12-drive motivational substrate in an isolated Node service behind Postgres RLS, dual-process arbitration, four provenance-tracked Neo4j graphs, a React/WebSocket interface with live drive telemetry and a conversational guardian channel, and a ~2.2M-param tensor sidecar (Python/FastAPI, AI-assisted) shadowing the LLM.

EXPERIENCE

Mediavine — Software Engineer III

Nov 2021 – Mar 2026 · Remote · Ad-tech platform serving thousands of publishers

- Built **Journey**, Mediavine's publisher-onboarding product, from the ground up with a small team — full onboarding workflow, analytics engine, and publisher-facing dashboards (React/TypeScript, Node, PostgreSQL).
- Primary developer for analytics and data visualization across the new dashboard platform, turning real-time ad-performance data into clear, actionable UI.
- De facto **AI-tooling lead**: built the internal Claude workflows and review patterns other engineers adopted when their own stalled; deepest Anthropic-surface experience on the team; initiated the company R&D program.
- Designed REST and GraphQL APIs and optimized PostgreSQL query performance across the platform.

TEKsystems — React Developer (Contract)

Jul 2020 – Nov 2021 · Charlotte, NC

- Built React/TypeScript applications with GraphQL (Apollo); core contributor to the shared component library and architecture reviews; spoke internally on generic component design.

Legal Associations Management — Full Stack Developer → Team Lead

Jan 2019 – Jun 2020 · Dothan, AL

- 10,000+-member platform; \$50K+/yr ad revenue as network sysadmin; Node.js badge service saving \$22.5K/yr; promoted to Team Lead in 9 months.

EDUCATION — Thinkful, Full-Stack Web Development, 2018
